

A baby with light hair and blue eyes is lying in a white wooden crib. The baby is wearing a white long-sleeved sweater and is covered up to their chest with a white, ribbed blanket. The baby's right hand is resting on the white wooden slat of the crib. The background is a light green wall.

Alle dekentjes, slaapzakken en dekbedovertrekken van Baby's Only zijn getest op TOG-waarde. Dit gebeurt door een onafhankelijk instituut. De TOG-waarde (Thermal Overall Grade) is een aanduiding voor de isolatiewaarde van textiel. Hoe hoger de TOG-waarde, hoe warmer en meer het materiaal isoleert. Het is belangrijk om het beddengoed aan te passen aan de omgevingstemperatuur. Ook verhoging en koorts vergen aanpassing van baby's kleding en beddengoed. De TOG-waarde is slechts een hulpmiddel. Belangrijk is om het comfort goed te blijven controleren aan nek en voetjes, de huid mag niet klam of koud aanvoelen. Veilige TOG-waarden, gemeten bij kamertemperatuur, liggen tussen de 0 en 4.0.

<b>Omgevingstemperatuur:</b>	<b>max. TOG:</b>
< 16°C	4.0 TOG
16°C - 20°C	3.0 TOG
20°C - 22°C	2.0 TOG
23°C - 24°C	1.5 TOG
> 24°C	0.5 TOG

Let wel op, hoe meer laagjes, hoe beter het isoleert, dus hoe warmer.

All blankets, sleeping bags and duvet covers of Baby's Only have been tested for TOG value. This is done by an independent institute. The TOG value (Thermal Overall Grade) is an indication for the insulation value of textile. The higher the TOG value, the warmer and the more insulating the material. It is important to adapt the bedding to the ambient temperature. An increased temperature and fever also require adaptation of baby's clothes and bedding. The TOG value is just an aid. What's important is to continue checking the level of comfort at the neck and feet: the skin may not feel clammy or cold. Safe TOG values, measured at room temperature, are between 0 and 4.0.

<b>Ambient temperature:</b>	<b>max. TOG:</b>
< 16°C	4.0 TOG
16°C - 20°C	3.0 TOG
20°C - 22°C	2.0 TOG
23°C - 24°C	1.5 TOG
> 24°C	0.5 TOG

Please note: the more layers, the more insulating, i.e. the warmer.

Der TOG-Wert (Thermal Overall Grade) sämtlicher Decken, Schlafsäcke und Bettbezüge von Baby's Only wurde von einem unabhängigen Institut getestet. Bei diesem Wert handelt es sich um die Bezeichnung des Isolationswerts von Textilien. Je höher der TOG-Wert, desto stärker sind die wärmenden und isolierenden Eigenschaften des Materials. Es ist wichtig, Bettwäsche zu wählen, die zur Umgebungstemperatur passt. Auch im Falle von erhöhter Temperatur oder Fieber gilt es, die Kleidung und die Bettwäsche entsprechend abzustimmen. Der TOG-Wert stellt hierbei nur ein Hilfsmittel dar, es ist wichtig, im Nacken und an den Füßen zu überprüfen, ob der Wärmegrad ausreichend ist. Die Haut darf nicht kalt oder klamm sein. Bei Zimmertemperatur sollte der TOG-Wert zwischen 0 und 4.0 liegen.

<b>Umgebungstemperatur:</b>	<b>max. TOG:</b>
< 16°C	4.0 TOG
16°C bis 20°C	3.0 TOG
20°C bis 22°C	2.0 TOG
23°C bis 24°C	1.5 TOG
> 24°C	0.5 TOG

Achtung: Je mehr Schichten, desto besser die Isolation und desto wärmer.

Tous les draps, gigoteuses et housses de couette de Baby's Only ont été testés pour déterminer leur valeur TOG. Cette opération est effectuée par un institut indépendant. La valeur TOG (Thermal Overall Grade) indique la capacité thermique d'un vêtement. Plus la valeur TOG est élevée, plus le matériau est chaud et isolant. Il est important d'ajuster la literie à la température ambiante. La fièvre et la montée en température nécessitent aussi un ajustement des vêtements et de la literie du bébé. La valeur TOG n'est qu'un outil. Il est important de surveiller de près le confort du cou et des pieds ; la peau ne doit pas être moite ou froide. Les valeurs TOG sûres, mesurées à température ambiante, se situent entre 0 et 4,0.

<b>Température ambiante :</b>	<b>TOG max:</b>
< 16°C	4,0 TOG
16°C - 20°C	3,0 TOG
20°C - 22°C	2,0 TOG
23°C - 24°C	1,5 TOG
> 24°C	0,5 TOG

Veillez noter que plus il y a de couches, mieux c'est isolant, donc plus c'est chaud.
